Parents and other caregivers often express that children, no matter what age, are not supposed to die before them. Yet it happens and those remaining struggle with how to go on with their grief. In this webinar:

- Participants will learn about the different ways that individuals are deeply impacted and affected after the death of a child at any age.
- Participants will be able to identify helpful and practical tips for coping with grief.
- Participants will be able to identify ways in which each family member may grieve differently after the death of a child.
